OptiClip TERRA ™

**THE FIRST
PAPER THAT
ILLUMINATES
YOUR SPACE**

Our **mission**

We bring **technology** and creative **innovation** together through our **products, services** and **people** to enhance energy efficiency, improve sustainability, increase digitalisation and promote wellbeing.

Our **vision**

Building on over a 120 years of experience to improve light and life for our customers, enabling them to focus on what they do best by transforming the way they live and work.

Our **brands**

Concord

©Arthur Pequin

Concord is dedicated to architectural lighting for galleries, museums and retail outlets. Its exceptional products have been recognised for their design and technical performance for almost 60 years.

Concord is driven by **3 major inspirations:**

Premium

Our luminaires redefine excellence and offer state-of-the-art technical performances for all high-value-added projects

Design

The pure, timeless design of our luminaires has been recognised for almost 60 years.

Architectural

The beauty of light for museums, galleries and retail.

Our brands

SYLVANIA

For over 100 years, Sylvania, has made its mark in offices/education, industry/logistics and the hospitality (hotels, restaurants) sector by combining performance, a wide range and eco-responsibility.

Sylvania is built on **3 main principles**:

Cost effective

From initial cost to operational efficiency, and long-term maintenance.

Functional

The eco-performance and visual comfort of our luminaires have been recognised over 100 years.

Versatile

We offer a wide range of lighting solutions to cover all project needs.

Our ranges

PRO™

PRO™ is the premium range of the Sylvania products tailored for professionals. This range combines outstanding technical performance with contemporary design and cutting-edge lighting technology. It delivers high-performing, sustainable lighting solutions specifically crafted for projects.

START™

Sylvania's START™ product line delivers efficient, cost-effective, and reliable lighting solutions. Designed to meet the demands of everyday projects, these products are the perfect replacement for traditional lighting—offering high quality, performance, long-lasting durability, and easy installation across all environments.

Discover some of our START™ range products on page 182-183 of the catalogue.

SpecialITE®

SpecialITE® offers a wide range for variety of applications such as grow lights for horticulture, insect control, petcare, swimming pool lights, industry and infrared.

LiFeSafe™

LiFeSafe™ emergency range offers up to 3 hours of emergency illumination, powered by advanced LiFePO4 batteries and backed by a 5 or 6-year warranty.

LiteGuard™

LiteGuard™ is made up of products specially developed to meet the needs of hostile environments and benefit from specific certifications. The range covers cleanrooms (healthcare environments), which are one of its main applications.

YourHome™

From creating a warm, relaxing light in the living room to a productive, functional atmosphere in the study, all of our solutions (lamps & luminaires) are shaped around the changing moods and needs.

Our digital solutions & services

SylSmart®

SylSmart® solutions empower the reduction of energy consumption and foster a culture of sustainability.

Our highly intelligent, robust and secure lighting control system is designed to meet the challenges of all industries using wireless frequencies and sensors. Our solutions provide real-time visual data on energy usage and guide you to a more sustainable future.

360 Services™

Implementing a holistic project management approach that balances the best financial interests of clients with the achievement of sustainability objectives which helps businesses deliver energy and cost-efficient projects is a delicate task which requires deep understanding, careful and precise attention whilst reducing the barriers and disruptions to adoption.

We help customers save energy, decarbonise, de-risk their investment and project timelines, minimise disruption, ensure access to key financial schemes, and help protect their capital with turnkey solutions for all phases of their project that safeguard successful project execution and ensure the client's needs are met.

Power™

Power™ Sun & Cell utilises the power of the sun through PV and storage solutions to reduce energy costs and increase efficiency, while also allowing accurate monitoring of the extended life of the installation.

Our applications

As an innovation leader, we supply an extensive range of lamps, luminaires and lighting control solutions for various professional lighting application areas.

[1]

[2]

[3]

[4]

Office [1]

We know that lighting impacts our health, mood and sense of well-being – and all of those things contribute to our productivity. We take a human centric approach to lighting office spaces, reducing negative elements such as eye fatigue and headaches.

Education [2]

The learning environment is where we cultivate ideas and nurture young talent. Light levels that are strictly regulated for UGR and flicker have an important role to play. Lighting also accounts for over 50% of electricity costs in most schools, presenting an excellent opportunity to increase efficiency and lower costs.

Logistics & Industry [3]

This is a demanding sector with demanding needs. Many of these buildings are running 24/7 and need an intelligent lighting solution that's cost-effective, low maintenance and sustainable. We work with these businesses to determine the total cost of ownership and guarantee a return on investment.

Museum & Galleries [4]

Lighting has many surprising uses in a museum or gallery. From illuminating exhibits and artefacts to making visitors feel comfortable and welcome, light is a huge part of the overall experience. We have a long and distinguished heritage in museum and gallery lighting.

[7]

[6]

[8]

Retail & Display [5]

Lighting can have a huge impact on the bottom line in the retail environment. From enticing window displays to encouraging customers to spend more time on the shop floor, lighting does so much more than illuminate a product. Done correctly, it can even reduce overheads.

Hospitality [6]

Ambience and atmosphere are key when it comes to hosting, and nothing impacts those things more than lighting. From hotels and restaurants to clubs and bars, we have a range of lighting solutions that can be tailored to suit any environment while creating unique customer experiences.

Residential [7]

Light is one of the key ingredients when it comes to making a house a home. Whether the challenge is to bring warmth to a sitting room or function to a kitchen, we offer home owners a range of cost-effective solutions based solely on their unique needs.

Outdoor [8]

Due to fluctuations in weather and the changing seasons, outdoor lighting can be a complex challenge. Our outdoor lighting solutions takes all of this into account, providing cost-effective lighting that requires little to no maintenance. For commercial premises, facade lighting can create expressive and memorable architectural lighting experiences.

LumiNature®: Living in natural light

Driven by the sun Time indoors

Humans have thrived over 200,000 years under natural sunlight. Our brain activity is linked to the rhythm of the Sun.

Due to modern lifestyle, 90% of our time is spent indoors. When our cognitive activity is at its strongest, we are most often subjected to artificially lit environments.

Physiological response

Light regulates so much more than what we see – beyond visible light. Natural-like light can impact:

Lighting plays a major role

It has a significant impact on how people feel and how they perform.

Circadian rhythm

Circadian rhythms are physical, mental and behavioural changes that follow roughly a 24-hour cycle responding primarily to light and darkness in an organism's environment. They can influence important bodily functions, sleep/wake cycles, hormone releases and more.

- Your mood
- Your behaviour
- Your cognitive functions
- Your motivation levels
- Your sleep/wake cycles

More natural light – no blue peak

Our LumiNature® lighting delivers a complete and balanced spectral distribution with all colours of light more evenly represented while eliminating the blue peak. This produces a natural, full-spectrum artificial light which enriches the colour of its surroundings and removes a major contributor to disturbed health cycles. Combine this with class-leading low glare optical solutions of Sylvania and Concord luminaires with exceptional low flicker rates for enhanced occupant comfort.

Excellent colour rendering

Get the most natural and truest colour reproduction in your spaces thanks to our exceptional colour rendering and colour fidelity across all colour temperatures. Enjoy all the benefits of more depth of colour and contrast without ultra-violet or infrared.

LumiNature® provides high CRI97+ from all colour temperatures, including the truest reds (R9>90).

Dynamic light - 100% adapted to the circadian rhythm

Our intelligent, wireless SylSmart® system enables dimmable, auto-adjusting tunable white light, that respects the circadian rhythm of the sun while also enabling full optimisation, automation, personalised control and flexibility. All installed with minimum effort and 100% programmed using the SylSmart® mobile app.

Rich and energising light – the role of melatonin

Melatonin is often referred to as a sleep hormone that regulates our chronobiological rhythms. Furthermore, it is an anti-oxidant as well as an anti-aging hormone that can support the fight against cancer. Melatonin is vital to the wellbeing of humans. Melatonin production is heavily influenced by the right kind of light at the right time of the day which the sun delivers effortlessly.

Too much time under standard artificial light reduces the body's ability to regulate the level of this unique hormone. LumiNature® ignites your body's healthy cycle for improved sleep, stronger productivity, and better health. Working in conjunction with your biological clock, it regulates a beneficial melanopic ratio throughout the day.

Empowering your digital world

Illuminate Your Space, Elevate Your Experience

When designing a lighting system, it's crucial to consider both its functionality and its environmental impact. While ensuring optimal comfort and aesthetics, we must prioritize energy efficiency and sustainability. Modern regulations and standards increasingly emphasize energy conservation in buildings. By selecting a solution that minimizes energy consumption, we can achieve a balance between comfort, simplicity, and environmental responsibility.

Redefining Lighting with Smart Technology

Intelligent lighting systems makes significant contributions to the eco-performance of residential buildings and introducing flexible solutions can deliver the desired functionality and aesthetics whilst also providing enhanced energy efficiency and cost savings. With its wireless technology, sensors, and distributed intelligence, Smart Lighting is the backbone of the digital infrastructure of buildings.

Communal areas

SylSmart® Standalone

Maximum Control, Minimum Installation.

A wireless, plug-and-play lighting control solution ideal for smaller applications.

Easy to install

Plug-and-play design with in-app setup, no additional wiring needed.

Dynamic control

Personalize scenes and animations, including RGB and TW, via the app or wireless wall switch.

Energy efficient

Customizable energy-saving features based on time, occupancy, and daylight.

Secure

High encryption via Bluetooth mesh with user-specific access levels.

SylSmart® Connected

Unlock the intelligent building. Using wireless mesh communication technology, SylSmart® Connected offers an ideal solution that's easy to install, has low initial cost, and is low maintenance.

Integrated intelligence

Multifunctional sensors in each luminaire. The system delivers secure wireless communication with distributed intelligence and reliable performance.

Rapid installation & Effortless scalability

No additional wires or hardware needed. Offsite cloud preconfiguration minimizes on-site disruption. Easily scales from single floors to entire buildings.

Energy efficient

Customisable energy saving features based on time, occupancy and daylight. App driven maintenance and minimal disruption.

Secure & Reliable

Designed with robust security measures, including cyclic keys, replay attack protection, and man-in-the-middle attack prevention. Security is integrated at all system levels with a lifelong approach.

SylSmart® Connected Pro

Paving the way to data driven efficiencies. A complimentary service to SylSmart® Connected, this innovative, IoT ready digital platform, will revolutionise the role of smart lighting for enhanced data driven efficiencies.

Manage assets from anywhere

Gain global oversight of your premises with dashboard, floorplan, and asset status views, while conveniently controlling operations remotely with advanced rules and light scheduling.

World of Connectivity Options

Benefit from cloud-based connectivity through an open API, facilitating seamless integration with Building Management Systems (BMS) and 3rd IoT services

Develop new business insights

Collect high-granularity historical data and leverage advanced analytics tools to optimize your lighting system. Additionally, explore contextual data to enhance building occupancy, improve space management, and boost environmental performance.

Cyber Secure

Designed with security at its core, the system is developed in accordance with industry best practices (OWASP2021; Azure defender)

360 Services™

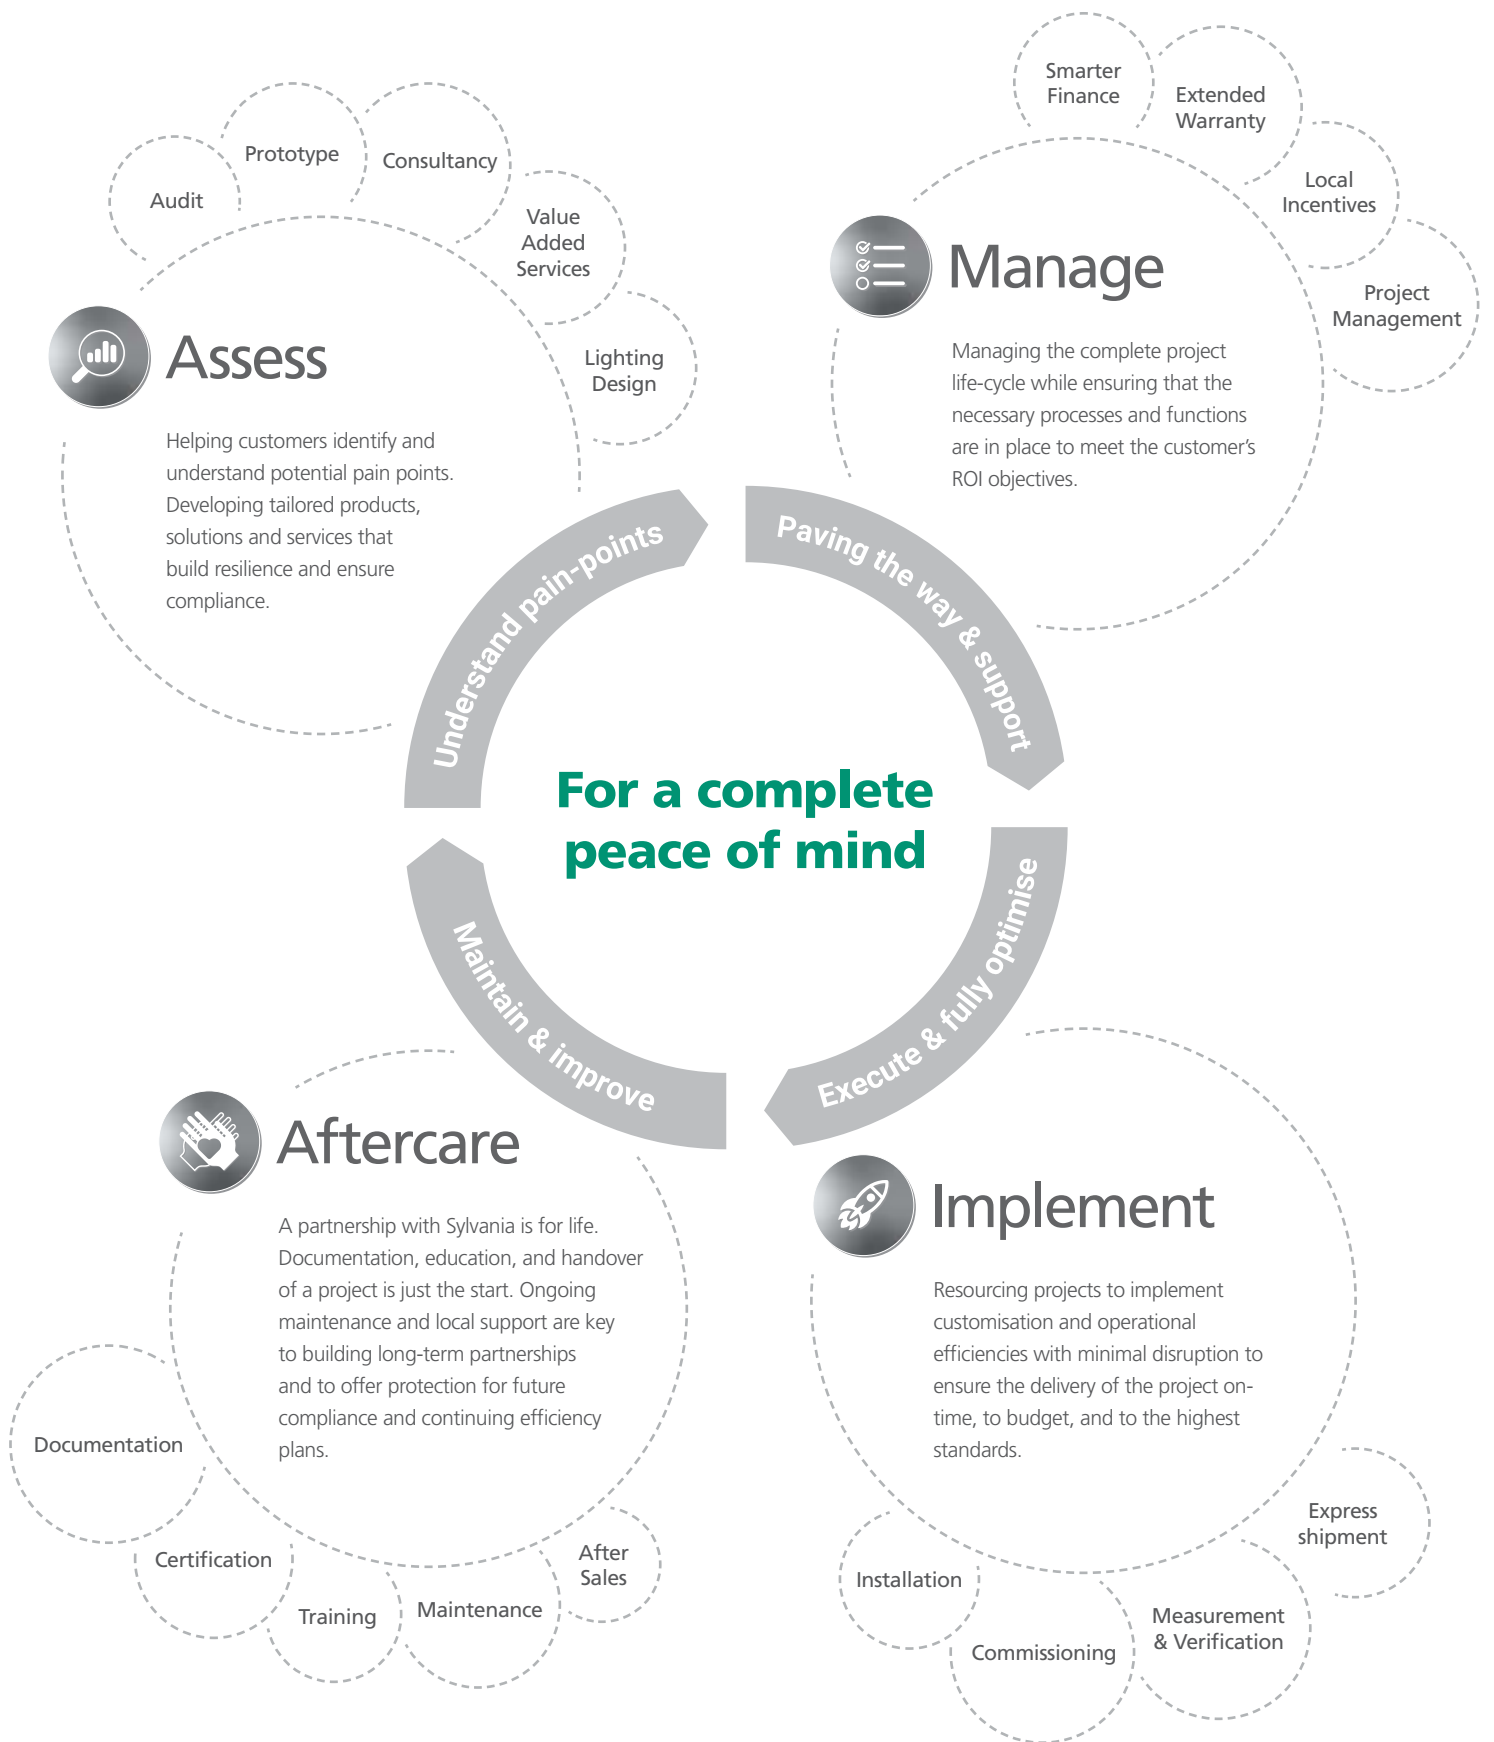

Tailored solutions with our holistic support

Our 360 Services have been created to offer our expertise and support you through the complete project cycle and beyond.

From an initial in-depth audit, we will tailor the complete design and deliver a turnkey solution for your lighting needs.

Whether you require support in developing bespoke lighting and product design, managing the overall project, improving cost-efficiency, saving energy, decarbonisation, or creating a future-proof system, we can assist you.

Made in Europe know-how at your service

Sylvania Group is a major player in the global lighting market offering innovative and sustainable solutions for professionals and consumers. We are present in more than 50 countries with 1,200 employees worldwide. With over 120 years of expertise, Sylvania Group manufactures and markets eco-responsible and digital lighting solutions. We support our customers throughout their projects with a comprehensive range of services. Our expertise and capacity for innovation are underpinned by our two historic brands, Sylvania and Concord. Energy efficiency, sustainable development, digitalisation, well-being and quality of light are at the heart of our mission.

- Distribution Centres

Made in Europe

We take pride in having local Research and Development and production facilities throughout Europe. Our factories and production units are located in France, and Germany. Our Research and Development offices are a leading part of our organisation and allow us to be at the forefront of technological innovations, and to be constantly on the lookout for new developments, whether it be emerging uses by occupants, environmental challenges, or compliance with new regulatory standards. This company structure is a guarantee of quality, and a reflection of our strong social, work-policy and environmental commitments. On this point, the manufacturing process and the European design approach significantly reduce the carbon footprint of our products.

Tailor-made products and services

Our factories offer tailor-made solutions to meet our customers' specific needs. We aim to develop environmentally efficient lighting solutions which comply with the requirements of our clients. Once the needs are clearly identified, our Research & Development team, with the help of our production units, make sure that we create the best products and solutions for our clients. Apart from being a manufacturer, Sylvania Group also offers services, designed to support our clients from A to Z. From a detailed analysis of your lighting systems, the installation and optimisation of your project, compliance with regulations, and financing solutions, Sylvania Group is an expert at your side, each step of the way.

- Quality control at every step

Committed to sustainable lighting solutions

Each time we develop a new product and service we engage sustainable practices to deliver optimal lighting solutions while minimising our environmental impact. We employ comprehensive waste and energy conservation protocols that involve everyone in the business and extend to all areas of our operations.

We believe a responsible business is a healthy one and the prosperity of business and society is closely connected. Our mission is to bring technology, creativity, and innovation together through our products, services, and people to enhance energy efficiency, improve sustainability, increase connectivity, and promote wellbeing.

By mobilising our collective strength and strategic commitments to focus on creating healthy communities and a healthy environment, we can achieve long-term value and have a positive impact on society.

Recognised for our contribution

Sylvania Group is a business with a culture that places its people at the centre of all it does. We provide a professional, inclusive environment that helps our employees excel at everything they do, with policies in place to ensure we continue to evolve and adapt to the world around us. We want a career with Sylvania to be challenging, rewarding, and fulfilling, where our people can reach their potential both personally and professionally. We are a progressive and innovative global business dedicated to delivering excellent products and services to our customers and an inclusive work environment for our employees. We value our people, their experience, their ideas, and their contribution and we thrive on empowering each other so we can grow and develop together.

Intelligent lighting for the future

Sylvania Group invests in delivering advanced solutions that enhance people's lives and help create better environments. Innovations such as SylSmart® and 360 services offer so much more than quality lighting solutions, they represent the foundations on which future innovation can be built and deliver sustainable cost and energy efficiencies.

Our approach to create an inclusive and sustainable business is recognised through our silver certification from Ecovadis, one of the world's most recognised business sustainability ratings. This measures non-financial management systems and sits alongside our internal metrics, which we evaluate against industry best practices in a global context and employ continuous improvement principles to ensure we remain ahead in our market.

TERRA is the Sylvania Group's initiative focused on sustainable lighting solutions, launched in response to the urgent need to address climate change and environmental issues. The Terra collection emphasises reducing ecological impact and promoting responsible consumption through innovative and efficient designs. It features eco-friendly manufacturing processes, using recycled materials and minimising waste. TERRA also upholds high durability and reliability standards, contributing to a circular economy by conserving and reusing resources. This initiative reflects Sylvania Group's commitment to sustainability and environmental consciousness in lighting products.

Our sustainable management performance is above 93% of the market, with 74 points obtained in the last assessment. Additionally, in line with our high ambitions and our SBTi commitment, we are dedicated to limiting global temperature rise to 1.5°C.

Made in Europe

Our heritage as a leading manufacturer of quality lighting solutions dates back more than 100 years and we are proud of our European production history. With manufacturing located in France and Germany and R&D facilities in Belgium, we can design, develop, and produce innovative lighting solutions and deliver them to market with pace and agility whilst significantly reducing our carbon footprint. Our European facilities are ISO9001, ISO14001, and ISO50001 certified, underlining our alignment with the principles of responsible manufacturing, and our continued commitment to reducing emissions and managing our waste.

Technology plays a critical role in increasing energy efficiency while enhancing luminaire performance and our comprehensive portfolio contains an extensive range of lighting solutions manufactured to the highest quality standards that offer extended lifetimes. We take responsibility for managing the full life cycle of products and have plans to embrace the principles of the circular economy in our approach to sustainability on future product development projects. Placing greater emphasis on product design helps us proactively reduce emissions and manage waste. The interchangeable components of some of our products increases their lifecycle and makes them in-line with our circular economy approach.

Sylvania's ESG pledge by 2030

To become a net-zero emissions company

To electrify our company car fleet

To become the circularity role model in the industry

"We have a clear commitment as a business: to be a leader and role model not just in lighting solutions but globally as a business that prioritises sustainability in our business operations. We are focused on being recognised as Climate Champions not just by policies but by activities that make a positive and sustained difference to our carbon and environmental footprint. But also we are deeply passionate about our staff and partners throughout the supply chain and that they are treated fairly, with decency and in line with global and local standards. Sylvania Group lives and breathes our ESG values, and we want that to be clear in all of our products and services that we deliver to our customers"

Enrique Castaño - Sustainability Manager EMEA

High efficacy

European manufacturing

OfficeLyte

The design of OfficeLyte is perfect for office, education and meeting rooms, with a lumen output up to 4400lm and efficiency up to 140lm/W. Visual comfort is an important factor when deciding upon your lighting scheme and our range conforms to EN12464-1 for indoor workplaces and all models are UGR<19 compliant almost eliminating glare within the office environment. It is characterised

by direct/indirect light for illuminance on faces and walls to encourage a comfortable, communicative working environment. OfficeLyte is also highly energy efficient with certain models featuring SylSmart® technology bringing yet even further savings on top of those already achieved with LED alone.

Optix Recessed

Optix Recessed is a flagship luminaire family of our office and education portfolio. Combining high performance glare-controlled optics (UGR<16) with state of the art highly efficient LEDs and wide variety of control options, Optix Recessed offers the perfect lighting solution for office, education and seminar room environments. The aluminium optics offer a luminance<200 Cd/m2 at 65° which is quite unique on the market.

In an effort to appreciate human health and well being, and as a result of the continuous evolution of the range, Optix Recessed now

brings you a new era in office lighting by recreating sunlight. Combining the innovation of Sylvania LumiNature® with SylSmart® technology Optix Recessed gives you one of the most natural, artificial lights in human centric lighting. Keeping in mind that modern offices should be connected to both broader business drivers and the people within it, Concord Optix Recessed continues to be available with our SylSmart® Connected and SylSmart® Standalone control options.

Circular Economy concept with innovative LED T5 tubes

Comfort light $UGR \leq 19$

Optimal light distribution

Rana Helios

Rana Helios recessed is the first range in our portfolio designed around the concept of circular economy. The combination of omni-directional 270° radiation tubes and the luminaire's parabolic mirror louvres result in optimal light distribution and excellent glare control ideal for office and education environment. Rana Helios can offer a perfect solution for those conscious users who are looking for the latest LED technology and

want to reduce their economical footprint on our environment. The heart of the luminaire is the long lifetime, highly efficient, upgradeable and replaceable Helios T5 LED tubes, the unique linear LED lamps exclusive to Sylvania. Thanks to the Helios T5 design Rana can provide high degree of flexibility: special spectra and high CRI options. Due to the standardised caps, the lamp replacement is simple and quick.

Recessed Modular

Helios: an exclusive technology from Sylvania
 The Helios T5 LED tubes are a completely new class of linear LED light sources with exceptionally high system performance. With the development of Helios, Sylvania has fundamentally changed the design of a linear lamp. This involved switching from LED emitters to gas-cooled LED filaments

Sustainable with paper made frame

Sustainable with replaceable light engines

Comfort light $UGR \leq 16$

In the age of sustainability and innovative design OptiClip Terra is the first luminaire made of 80% of paper. This renewable resource, significantly reduces the carbon footprint associated with traditional lighting materials like plastic and metal. The production process is also energy-efficient, further minimizing environmental impact. When OptiClip Terra reaches the end of its life cycle, its paper part can be easily recycled or composted, ensuring a minimal environmental footprint. Of course, OptiClip Terra is first and foremost a luminaire: it can be cleaned and is resistant to fire

and humidity.

To go even further in terms of sustainability, the OptiClip Terra is designed around the removable and interchangeable light engines set flat on the surface of the fixture, connected with a plug & play cable to the driver.

The combination of the high lumen LED and special lens provides high efficacy and uniform light output while due to the glare control (UGR < 16). OptiClip is suitable for workstations like offices, conference rooms, classrooms.

Cleanroom compliant

Highly resistant (IP65)

High visual comfort

Panel IP65 CleanRoom

LiteGuard™

The Panel IP65 CR is designed for optimal water and dust resistance, and it is certified compliant for cleanrooms. This new LED panel adapts to the most common installation requirements in the healthcare sector (hospitals, laboratories), the catering industry (professional kitchens), and more. It offers excellent waterproofing with an IP65 rating (top and bottom). It is certified for use in cleanrooms, Class 3 - 9, according to ISO 14644-1:2015.

The polystyrene diffuser is resistant to detergents containing hydrogen peroxide or chlorinated alkalis. It provides excellent color rendering with a CRI90, recommended for consulting rooms. The panel ensures uniform light distribution through backlit technology and a prismatic diffuser. It also offers low glare with a UGR<19. The panel has a low profile of 34mm and is available in three sizes: 600x600mm, 625x625mm, and 1200x300mm.

Elegant & discreet design

Direct/Indirect distribution

Areum Suspended

Suspended luminaire family of slim design with direct/indirect light distribution. The combination of the flat profile and the hidden electrical cable creates an illusory floating light effect offering an elegant solution to all office applications. It comes in two lengths, 1200mm and 1500mm, depending on the required flux level. A metallic external driver box, which can be mounted on the ceiling surface, ensures easy maintenance. The profile is powered

through a suspension cable for easy installation and minimal visual impact. It offers standard luminous flux levels of 5,150 and 7,000lm, which can be manually adjusted via a non-dimmable driver DIP switch to meet the desired light level. The light distribution ratio is 70/30% direct/indirect. This profile is ideal for office areas, maintaining a UGR of ≤ 19 , and is suitable for environments with computer screens in accordance with EN 12464-1.

Versatility

Wide range

Easy installation

DeltaWing

Deltawing is a surface mounted luminaire range for extensive use. Its uniform light distribution combined with a slim but robust design makes it the perfect solution for a wide range of applications including circulation areas of educational premises, healthcare applications, office buildings and storage facilities. Suitable for surface, wall, cable wire and suspended mounting.

The family is available in two dimensions, variable lumen outputs and high performance. Due to the DIP switch option the flux level can be manually set up from 2,650lm up to 4,600lm (4000K & 1200mm) and from 4,300 to 7,400lm (4000K & 1500mm) and up to 135lm/W system efficacy level.

The curved-profile fixtures end in polycarbonate caps. The smooth polycarbonate extruded diffuser provides high efficiency, the precision prisms are designed to optimise light output.

Deltawing offers non-dimmable, DALI, SylSmart® Standalone and integrated Microwave sensed options with corridor function. The integrated Microwave sensor mounted discretely behind the diffuser helps further to reduce energy costs. Easy installation with removable diffuser, three terminals for through wiring. The luminaires are sold with surface mounting brackets.

Three different optics

Versatile application

Otao Linear

The Otao Linear is the Sylvania's new proposal to those customers who look for a sleek, modular LED lighting system designed for offices or retail environments. Depending on the application this highly adaptable solution can be mounted either standalone or as a continuous, uniform line of light. The product can be mounted in several ways: ceiling and wall surface-mounted, suspended or ceiling recessed, making it a versatile choice for any design need. The modularity of the product is almost endless, only the user's imagination can set the limits. The choices like easy switch between colour

temperatures, the manually adjustable light output, the standalone or continuous line mounting option or the easy upgrade of the luminaire via indirect module to create direct/indirect light distribution are only a few on the long list of the product's features.

All versions are finished in elegant white, ensuring a clean, modern aesthetic that complements any interior design. With its high efficacy of up to 145lm/W, impressive lifespan over 100,000 hours at L80B50 and reliable performance certified by ENEC, the Otao Linear is the perfect choice for those seeking efficient and stylish lighting solutions.

Solstice

Solstice is a comprehensive downlights family, specially developed for the architectural specification market. With its minimalistic, yet distinguishable aesthetics, Concord Solstice offers a wide range of lighting design options in different sizes and shapes. The floating reflector and the unique style of the range can provide a signature look to any lighting design project in the Retail, Office, Education or Hospitality segments. The product family uses the latest Bridgelux high-efficiency LED chips, which guarantee superior quality and reliability. Its LumiNature® versions deliver a complete and balanced spectral distribution while eliminating the blue peak. Concord Solstice offers a wide range of lumen options, starting at 1000lm and reaching 6000lm. Due to the deep reflector design, Concord Solstice

has low glare light of UGR<19 for lumens lower than 2400lm with wide light distribution and beam angle of approximately 70 degrees. A double Wallwash version is also available.

The product is available in 3 body sizes - 150mm, 200mm and 250mm and two different shapes - round and square and with IP40 & IP65 protection rate. The range comes in two different heat sink colours (black and white) and five reflector colours (silver, white, black, gold and sandblast). Concord Solstice is available as a recessed luminaire, with surface mounted and pendant options to follow soon.

All versions of Concord Solstice can be controlled with either DALI (push-dim) or with SylSmart® drivers.

Multipower solution

Insaver

Insaver is a comprehensive range of downlights with lumen values from 620lm to 4950lm. The redesigned, patented lenses provide very good uniformity of light, bigger beam angle of 70 degrees and a wide light distribution curve. Insaver offers reduced glare of UGR<19 for lumens up to 3050lm, which makes it perfect for offices and education areas.

The high output versions of 2950-4950lm are perfect for commercial & hospitality environments. The range benefits from high efficacy: up to 132lm/W. The Insaver products have a long lifespan (88,000hrs L80B20) and 5-year warranty. PIR, DALI and SylSmart® Standalone options are also available.

Ludospot

Ludospot 111 is a range of integrated LED accent downlights with a modular design. A wide range of housing options allows direct replacement of most recessed halogen spotlight installations on the market. It offers easy and quick mounting of the modules thanks to the Twist&Lock system, the housings can accommodate single, double or triple LED modules, depending on the project's requirements.

Ludospot 111 is the perfect choice to replace 35W and 70W HID recessed lamps or ceiling mounted spots. The high colour rendering index CRI90, with SDCM <3 light colour consistency makes it ideal for retail, shops, malls and hotel hospitality applications, with single or multiple LED module housings. There is a shape to suit every type of ceiling - choose from round, square, rectangular or even a surface mounted ceiling frame.

360° adjustability

Colour temperature adjustability

Compatible with glass wool and mineral insulation material

Obico

The Obico spotlight range combines high lumen efficacy with outstanding value and multiple options in a single luminaire. The Obico range offers IP65 protection from water and steam as well as 360° adjustability of the product, making it the preferred choice for installers and contractors that are looking for an all-in-one solution.

Available in 68 and 80mm diameter, the luminaire is compatible with trailing-edge and leading-edge dimmers and comes with a loop-in, loop-out wiring system integrated in the driver to ensure a quick and simple installation. With a simple

flick of a switch located on the driver, the colour temperature can be selected as 2700K, 3000K or 4000K (3000 & 4000K for the Obico 80mm) The slim profile of 40mm makes Obico suitable for shallow ceiling voids. The fire rated model is designed and tested to meet Fire Rating Standards for safety and reassurance: BS 476-21:1987.

SYLVANIA

High visual comfort

Elegant & discreet design

Direct/Indirect distribution

Areum Wall

Elegant wall mounted luminaire with direct/indirect light distribution for office corridors or for supplementary lighting in offices and meeting rooms. The low-profile rectangular housing combined with rounded edges provides timeless appearance. The aluminium profile has a height of 28mm and features curved edges. Its body dimensions are 600x200mm. A metallic external driver box can be mounted on the wall surface for easy maintenance and installation.

The luminous flux reaches up to 5,850lm, with the light level adjustable manually via a driver DIP switch. It has a 40/60% direct/indirect light distribution ratio, making it ideal for office areas with a UGR ≤ 16 and environments with computer screens, in accordance with EN 12464-1. The LED colour consistency (initial MacAdam) between luminaires is ≤ 3 SDCM, and it offers an efficacy of up to 130lm/W at a CRI of 80 and 4000K.

Raxa

Raxa presents a refined solution for lighting needs, combining aesthetic finesse with functional excellence. Its slender profile of 32mm exemplifies contemporary elegance, setting a benchmark for modern design standards.

A notable feature of Raxa is its discreet adaptor for electrical safety, seamlessly integrated within the track for a streamlined appearance. This innovative design ensures both efficiency and safety during installation, allowing users to focus on creating the desired ambiance without compromise.

Available in various configurations, including Wall Washer, and UGR19 Lenses options. Raxa transcends mere illumination to curate spaces of comfort and tranquility. Whether deployed in high-end retail or hospitality settings, its ambient lighting transforms environments into inviting retreats, fostering a sense of warmth and relaxation.

SYLVANIA

Adds flexibility to any space

Easy installation and versatile application

Sustainable and modular design

Pixo Line

Pixo Line is a linear track system, suitable for office, retail and logistics environments. Pixo Line offers an easy installation with two separate modules which can be used for the installation on track.

Pixo Line has a light module for various applications which can be combined with a multipower or DALI driver. The multipower driver module with 8 settings meets all installation needs with one single product. The product delivers up to 7500lm. Available in warm white (3000K) and neutral white (4000K) colour temperatures, CRI80, white or black finishing colours.

Pixo Line adds flexibility to any space due to the variety of product options that customers can choose from.

UGR19 and 90D Beam versions as standard, asymmetric and double asymmetric versions can be provided on request.

Pixo Line is Zhaga Book 14 ready.

Lytespan

Lytespan is a comprehensive tracks range, available in round, trimless recessed and H-track versions. Lytespan is offered in two colours - black and white. The various installation accessories allow the product to be surface mounted, suspended or trimless recessed.

The product's modular structure, makes it suitable for various applications such as shops, department store, offices and hospitality environments.

Lytespan is made of aluminium and it is available in three different lengths - 1m, 2m and 3m.

Isoline

Isoline is the latest design from Sylvania of a linear trunking system that can be used in many applications from logistics and industry to warehousing and supermarkets including light industrial spaces. Its flexibility creates an effect that provides an excellent quality of light output coupled with high efficiency to offer a short payback on investment. Easy to specify and simple to install (no tools required connection system), Isoline provides a complete range for a linear lighting system.

The range is manufactured in France and offers a 5 wire or 8 wire version to provide the ultimate options within the system. DALI dimming with Emergency down to basic switching. Various optical distributions allow the designer to maximise the light output in any space, complimented with 3-hour emergency options. The range comes with a full suite of accessories.

Aesthetically pleasing

RTS

RTS is a complete versatile lighting trunking system providing an efficient and effective way of lighting larger spaces including supermarkets, logistical spaces and light assembly industrial areas. Simple design, energy-efficient, low maintenance option. It is the perfect solution where conventional lighting systems need replacement and require a low cost, simple installation tool free. RTS is an exciting product with the installer at its forefront. With

various light engine options RTS is a flexible offer enough to meet the demands of many applications. Its simple assembly and tool free design creates a seamless light line with Emergency and DALI options. RTS provides the end user to dismantle the light source and re-position to wherever the next promotion or area of importance.

RetrunKit

RetrunKit is a universal trunking unit designed for compatibility with trunking rails from various brands, making it suitable for replacing fluorescent lighting units in existing installations. It offers a multipower solution ranging from 41 to 75W, providing luminous flux between approximately 6,200 to 11,000lm, with an efficiency of up to 159lm/W. Users can easily select from five different light output levels using the integrated DIP switches.

Additionally, the unit features an integrated switch that allows users to choose between three color

temperatures: warm white (3000K), neutral white (4000K), and cool white (5000K). Its 1530mm length, fixing system and connectivity make it very easy to install.

Resisto

Resisto, the Sylvania weatherproof range, excels in quality, provides improved installation and functionality, and helps achieve greater energy savings with its SylSmart® Standalone and Connected enabled versions in parking lots, workshops, storage facilities and underpass areas. Its wide range means it can meet almost any need. Manufactured in Germany, it also can be customised to meet specific customer requests. Resisto is an ideal replacement for T5 and T8 luminaires, offering great energy savings. The luminaire benefits from a water and dust resistant

polycarbonate body and diffuser offering IP66 protection (IP65 for SylSmart® version) and an impact rating of IK08 (SylSmart® sensor IK03). For further cost savings, available with microwave presence sensor with dedicated corridor function versions and no dark end.

Sylvania Granit®

Sylvania Granit is a highly efficient and long lasting Highbay range ideal for the tough environmental conditions of industrial applications. The compact, circular luminaire combines powerful light output with easy handling. The 1 metre chain and 1.5 metre flying lead, provided as standard, allows for easy installation. This is further supported by the product's low weight. Our range provides clear, bright light to aid productivity. Sylvania Granit has been developed to be energy efficient and long lasting; making it the go-to range for both installers and contractors. With the centre module

for microwave and PIR occupancy sensing further energy savings are just a twist away. The SylSmart® Connected enabled versions ensure unparalleled smart lighting experience with versatility, flexibility, and security as standard. Versatile mounting options make Sylvania Granit a Highbay luminaire that can be used in a wide range of applications. In addition to the standard suspension chain version, rotating ceiling installation offers added flexibility by using the separate bracket.

Floodlights

SYLVANIA

High efficacy up to 162lm/W

Wide range of lumen outputs from 3,000 - 46,400lm

Robust Exterior floodlight made of die-cast aluminium body

Kalani

Kalani is highly efficient, durable die-cast aluminium body floodlight, making it a perfect choice for recreational sport, building facade, parking lot or area lighting applications providing 1:1 replacement of conventional technologies. The family comes in 5 different sizes, available in Symmetric and Asymmetric beam angles. Designed to withstand all types of weather, its IP66 protection rating, IK08

heavy duty housing and operating temperature range of -30 to +50°C mean it requires minimal maintenance. Kalani is delivered with 1.5m cable, so no need to open the gear box during installation. Its universal mounting bracket allows wall or surface mounting with the possibility of tilting upwards or downwards.

Emergency

SYLVANIA

Self-test luminaires

Multiple mounting options

Robust design

The LiFeSafe Standalone Emergency range offers products for all emergency applications available in Self-Test & DALI.

Maintained & non-maintained luminaires providing 3-hour emergency duration, utilizing LiFePO4 batteries.

The LiFeSafe range consist of the following Self-Test and DALI product types: Multifix Exit Signs, Wall Mounted Exit Signs, Bulkheads, Downlights, Track & Twin Spots.

LiFeSafe Multifix offer Surface, Recessed, Suspended, Wall and Flag mounted products. The Suspended version comes with an adjustable steel wire and includes six ISO7010 legends. Available in maintained or non-maintained operation.

LiFeSafe Exit Signs are ultra slim with integrated downlight. It includes four ISO7010 legends.

Available in maintained & non-maintained operation. IP65 option only in DALI.

LiFeSafe IP65 Bulkheads are suitable for both interior and exterior use. Available in lumen outputs 165lm / 200lm / 650lm & 1170lm. DALI versions

are available in Black/White. IP65 Available in maintained & non-maintained operation.

LiFeSafe Recessed Downlights offer interchangeable optics including Open Area & Escape Route lenses. Non-maintained mode only. DALI versions are available in Black/White as standard with optional 80mm bezel ring accessory.

LiFeSafe IP65 Surface Downlight Self-Test offer interchangeable optics including Open Area & Escape Route lenses. Non-maintained mode only. DALI versions with interchangeable optics. Available in Black/White with an optional IP65 Black or White accessory.

LiFeSafe Track Emergency are available in DALI and are suitable for Stucchi / Eutrac & Global track. Available in Black/White. Available in non-maintained operation.

LiFeSafe IP65 Twin Spots are available in DALI and with 3 lumen outputs, 768lm / 1105lm and 2062lm. Available in maintained & non-maintained operation. White only.

Case study

ParisTech School of Chemistry PSL:
Combining energy efficiency and comfort

Client: ParisTech School of Chemistry PSL, Paris (75)

Project: Improved comfort for users
& Minimal disruption during works

Products used: Resisto SylSmart Connected,
OptiClip SylSmart Connected, START Panel,
START Surface IP66, Insaver Slim, Rana Asymmetric

Project year: 2023

Founded at the end of the 19th century in the 5th arrondissement, the Ecole Nationale Supérieure de Chimie ParisTech PSL trains engineers and houses research laboratories. The school has been undergoing constant renovation since 1995, with major works taking place on more than 14,000m² of premises. The France Relance plan introduced in 2021 has accelerated this modernisation process.

The work had to be carried out without closing this public access building (ERP) to teachers, researchers and students.

The Sylvania design office, which has RGE études certification, was responsible for carrying out the study, based on existing surveys, the hours of activity and the level of natural lighting in the various areas.

The original 2,000 fluorescent luminaires throughout the site have been replaced with more energy-efficient LED luminaires. Combined with SylSmart Connected. According to the on-site audit and analysis, the new installation will reduce energy consumption by 66% based on 2,500 hours of annual operation, which is a great start inline with the 60% reduction target set out in the France Relance plan.

The installation of LED luminaires combined with the SylSmart intelligent lighting management system therefore has a dual benefit: significantly improved comfort for researchers, students and teachers in their daily tasks, and reduced energy costs for the building manager.

Technical information

Ballast lumen factor BLF (%)

Refers to the ratio of light output from the lamp on emergency operation to the nominal light output.

Beam Angle

Indicates how broadly the light is emitted from a reflector lamp. It can be thought of as an imaginary cone whose apex intersects the lamp face, and the breadth of the cone extends outwards to the point where luminous intensity has diminished to 50% of the centre beam value.

Binning

The term binning refers to the variations which occur within a single production batch of LED's such as chromaticity, lumen output and forward voltage. It is important that a specific bin has been identified and selected to ensure a uniform and constantly even lighting installation is achieved. If all the LED's were selected from one production batch and used in the same luminaire or installation, there would be a mix of colour temperatures and brightness levels. For the lighting manufacturer / designer binning is an essential part of LED specification.

MacAdam ellipses methodology was created in 1943 for mathematically constructing ellipses around target points, something which became very useful for the lamp industry. ANSI C78.377 is now the standard for chromaticity specified by the American National Standards Institute. ANSI recommends that lamp manufacturers stay within a "4-step" ellipse. This means that, given a certain target point on the CIE diagram, manufacturers are given a fairly wide range of perceptible differences.

Candela (cd)

The unit of measurement for luminous intensity, which refers to the quantity of light emitted in a particular direction. The symbol is cd.

Colour Correlated Temperature (CCT)

An incandescent light bulb is very close to a perfect black-body radiator, so its colour temperature is basically the temperature of the filament. However many light sources, such as fluorescent tubes or high intensity discharge lamps, emit light by processes other than thermal radiation and therefore it is not possible to apply the black-body spectrum. For these light sources it is possible to assign what is known as a colour correlated temperature (CCT). The CCT is the colour temperature of a black-body (Planckian) radiator which most closely matches the colour of the light emitted from the lamp.

Warm White 3,000K

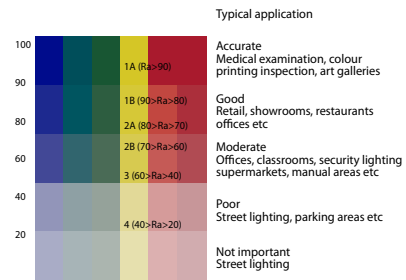

Neutral White 4,000K

Colour Rendering Index (CRI)

The colour rendering of a light source is an indicator of its ability to realistically reproduce the colour of an object. The chart illustrates our ability to accurately determine colour depending on the colour rendering properties of the light source. The higher the colour rendering index (on a scale of 0 to 100) of the source the better our ability to perceive differences in colour, which is a considerable aid to highlighting fashion products and effective display of coloured artworks.

The CIE colour rendering index (CRI) is a method to determine how well a light source's illumination of eight standardised colour patches compares to the illumination provided by a reference source. At Ra (8) the perceived colour shift of eight reference colours is measured as a percentage and averaged to give one number. However it is currently understood that due to the spectral power distribution of LED's that instead of using the standard Ra8 it is important to include 7 additional colours which include red, yellow, blue & green and use Ra14 to ensure better results.

Colour Temperature

Colour temperature is a characteristic of visible light that plays a significant role in lighting applications. The colour temperature of a light source is the temperature of a perfect black-body radiator that radiates light of a similar appearance to that of the light source. The colour temperature is measured in units of absolute temperature; Kelvin (K).

Colour temperature works paradoxically to our cultural associations with colour, red as hot and blue as cold. On the black-body curve, blue occurs at higher temperatures than red. A good example is a candle which has a warm red orange appearance but in fact has a low Kelvin temperature, 1,850K. Therefore higher colour temperatures (5,000K more) are called cool colours (blueish white); lower colour temperatures (2,700K – 3,000K) are called warm colours (yellowish white through red).

The Planckian locus shows the chromaticities of black-body light sources of various colour temperatures and lines of constant correlated colour temperature shown within the CIE chromaticity diagram

Technical information

Dimmability

The Sylvania lamps range includes Dimmable LEDs lamps. Most conventional dimmers have been designed for incandescent lamps and are therefore rated for higher minimum loads (W) than LED lamps consume. There may therefore be some restrictions in terms of functionality of dimmers with individual LEDs – but when more than one lamp is used to increase the total loading, dimming becomes easier. For full list of dimmer compatibility, please consult your local salesforce.

Downward Flux Fraction (DFF)

The factor of the total LOR, which is downward, taking the combined ULOR and DLOR as 100%. Using Cassini as an example, the DLOR is 37% and the ULOR is 15% so the combined is 52%. If this is taken as 100% LOR, 72% is downward (37% divided by 52%).

Drivers

Electronic devices that transform the high mains voltage into a constant current lower voltage for operating the LEDs. A miniature electronic driver is contained inside the base of each Sylvania LED lamp.

Glare

Discomfort glare is due to a high contrast between the source of light and the task. It is for that reason that luminance values are limited for certain tasks.

Heat Sink

A device used to conduct heat away from the LED sources and dissipate it to the surrounding air. The more efficiently an LED is cooled the greater its efficacy, light output and lifetime. Materials having excellent thermal properties and optimised cooling fin geometries are engineered into our lamps and luminaires to deliver the pinnacle of performance.

Infrared (IR) Radiation

Comprises electromagnetic waves in the spectral range between visible light and microwaves, which produce a heating effect when absorbed by materials. All lamps and luminaires produce infrared radiation, but the quantity emitted by LEDs is far lower than other technologies and this makes them ideal for reducing air conditioning load, as well as for the illumination of heat-sensitive goods.

Illuminance

This definition determines the amount of light that covers a surface. If Φ is the luminous flux and S is the area of the given surface then the illuminance E is determined by $E = \Phi/S$. The unit of illumination in SI system is lx, and in foot-pound system it is footcandle. One lx is the illuminance of 1 m² surface area uniformly lighted by 1 lm of luminous flux.

Junction Temperature (Tj)

The temperature of the Junction of the LED die inside the LED lamp. Measuring the LED die temperature by direct mechanical means is difficult and may lead to erroneous results. It is recommended that the T_j is calculated with manufacturer's data through measurement of the temperature at the solder point (T_{sp}).

LED (Light Emitting Diode)

The semiconductor in the LEDs we provide emits blue light. The colour of the light ultimately depends on the phosphors used on the surface of the LED or lens.

Lens

An optical component having two refractive surfaces, at least one of which is either convex or concave. In LED lamps the function of a lens is to focus or disperse the light rays to achieve the desired beam angle or light distribution pattern.

Lifetime

LED lamps can have extremely long lives, however their light output diminishes as they age. They can carry on working until they are emitting less than 10% of their initial light output, but with so little light left they would be practically useless. Sylvania defines the lifetime of its LED lamps the same way as for other lamps: i.e. the burning hours until the light output has decreased to 70% of the initial value, or when 50% of a group of lamps will have failed – whichever is the soonest. The International Electrotechnical Commission (IEC) is currently preparing an international standard based on similar threshold values.

Visible light

Light Electromagnetic radiation with a wavelength between 380-780nm. Ultraviolet light has a wavelength of less than 380nm whilst infrared light's is greater than 720nm.

Lighting level

A measure of light falling on a particular point or surface. This unit is measured in lux.

Light output ratio

The ratio of the luminaire light output to lamp light output. The efficiency of the luminaire.

Lumen (lm)

Unit of luminous flux used to describe a quantity of light emitted by a source.

Lumen Maintenance

Rated Lumen Maintenance Life (Lxx): The elapsed operating time over which the LED light source will exceed the percentage, xx, of its initial light output.

- L80 = Time to 80% lumen maintenance, in hours
- L70 = Time to 70% lumen maintenance, in hours

For LED lamps and luminaires, lumen maintenance is often shown as curves of relative lumen output over time for the LED under various operating conditions, such as drive current and junction temperature.

Luminance

The measure of brightness with which the eye perceives an illuminated surface from a certain direction. The luminous intensity per unit of visible surface of a light source (direct) or an illuminated surface (reflection). Luminance is indicated in candelas per square metre (cd/m²).

Luminous efficacy (lm/w)

Indicates how efficiently a light source converts electrical energy to light.

Luminous flux (lm)

The total light output of a light source measured in lumens.

Luminous intensity (cd)

The power of a source or illuminated surface to emit light in a particular direction, measured in candelas.

Lux (lux)

The unit of illuminance, equal to one lumen per square metre (lm/m²).

Technical information

Illuminance cone

This shows beam angle and illuminance figures at different heights.

Polar curve

The graphic representation of the luminous intensity in different directions. If two curves are plotted, the distributions are in two vertical planes. They are absolute values.

Recycling

Feilo Sylvania lamps and luminaires are extremely durable and do not contain any mercury, lead or other toxic metals. However because their drivers contain electronic components they must be disposed of as waste electrical and electronic equipment at the end of their life.

Reflector

An optical component having a reflective surface (the surface could be specular or diffusing depending on the job it is required to do) surface, which captures light rays from the source and bounces them back at a particular angle. Although more commonly used in incandescent and halogen lamps, some Sylvania LED lamps use reflectors to control their light instead of a lens.

Room index K

An index relating to the dimensions of a room influencing the amount of light emitted from the fitting onto the working surface.

$$K = \frac{a \times b}{h \times (a+b)}$$

where: a = room length

b = room width

h = height between the luminaire and working surface

Spacing to height ratio (SHR)

Used to determine the maximum distance between luminaires. The ratio of the distance between adjacent luminaires to the distance between the luminaire plane and the horizontal working plane.

Switching Cycles

LED lamps cannot be switched on and off indefinitely, but are rated to tolerate an impressive 60,000 switching cycles or more.

TCO (Total Cost of Ownership)

TCO includes all the costs over the entire life of a lamp or for a particular operating time. It covers procurement costs, electricity consumption costs, relamping costs and may even incorporate a reduction in the necessary air conditioning load. LEDs are presently more expensive to purchase than lamps based on other technologies, but their minimal energy consumption results in rapid payback when replacing incandescent and halogen lamps.

Transformer

A device for reducing the high mains voltage down to a lower voltage. A distinction is made between conventional (magnetic) transformers and electronic transformers.

Uniformity ratio of illuminance

This indicates the degree of evenness of the light on the working surface and is shown as a ratio of the minimum to the mean lighting level on a surface. It becomes less even as the uniformity decreases. Typically you want 0.7 as a min for most schemes.

Ultra Violet (UV) radiation

Comprises electromagnetic waves in the spectral range between visible light and X-rays, which are invisible to the human eye but essential for all life (delivered via natural sunlight). Small amounts of UV are emitted by many light sources (e.g. Halogen and Discharge) and over time will cause fading of coloured objects being illuminated. Feilo Sylvania lamps and luminaires do not emit any UV radiation.

Utilisation factor

The ratio of the light flux which the reference surface receives to the total luminous flux. This is influenced by the shape of the room and selected luminaire and is expressed in the form of UF tables.

Emergency Lighting

Emergency lighting is a vital and necessary safety requirement for most building types. The safety it provides for occupants is paramount and not negotiable.

Product Safety

- All Feilo Sylvania emergency luminaires carry the CE mark. They are designed to conform to BS EN 60598-2-22 and are manufactured in accordance with the quality system BS EN ISO 9001 under certificate number FM01687
- Any emergency lighting luminaire conversion other than by Feilo Sylvania to a CE marked luminaire invalidates this CE marking and its associated legal protection

Emergency Lighting Equipment

This comprises an inverter plus a set of batteries, which conform to BS EN 60598-2-22 and may be mounted:

- Integral within the luminaire (self contained – integral)
- Remote from, but within 1 metre of, the luminaire (self contained remote)

Non-maintained Operation

In this mode of operation the emergency lighting lamps are not normally energized. An automatic monitoring and switching system is provided to switch on the emergency lighting if the normal supply is interrupted

Maintained Operation

- A single lamp is used for both general and emergency modes
- In multi-lamp luminaires only one lamp will be used for the provision of emergency illumination
- Emergency lighting is provided for at least 3 hours (1 hour duration available to special order)

Maintained Remote Emergency Gear

Downlights are almost all with remote emergency packs. Linear and ambient fittings are likely to have emergency gear within the fitting. Where the housing design precludes integral gear a remote control gear box is provided complete with connection cables.

Product Combined Operation (also known as Sustained)

- Separate lamps provide general and emergency illumination
- Emergency lighting is provided for at least 3 hours. (1 hour duration available to special order)

Self-testing

Automatic self-testing and monitoring of Feilo Sylvania luminaires is available to special order on a project basis.

Central Battery

Feilo Sylvania luminaires for use with a central battery system are available to special order on a project basis

System Design

This guide should be read in conjunction with current standards

Legislation Changes & Requirements

The British Standard BS5266 has been revised to conform with the European Standard EN1838 (issued in the UK under reference BS EN1838/BS5266 Part 7) which specifies luminous requirements for emergency systems installed in premises. It also now calls up the luminaire product standard BS EN60598-2-22: 1999

Emergency lighting is provided for use when the supply to the normal lighting fails and is therefore powered from a source independent of that supplying the normal lighting. For the purposes of this standard emergency lighting is regarded as a generic term of which there are a number of forms

Definitions

Emergency Exit

An exit which is intended to be used in an emergency.

Escape Route

A route designated for escape in the event of an emergency

Emergency Escape Lighting

That part of emergency lighting that provides illumination for the safety of people leaving a location or attempting to terminate a potentially dangerous process before doing so.

Escape Route Lighting

That part of emergency escape lighting provided to ensure that the means of escape can be effectively identified and safely used when the location is occupied

Open Area Lighting

In some countries this is known as anti-panic lighting. This relates to that part of emergency escape lighting provided to avoid panic and provide illumination, allowing people to reach a place where an escape route can be identified

High Risk Task Area Lighting

That part of emergency escape lighting that provides illumination for the safety of people involved in a potentially dangerous process or situation and to enable proper shut down procedures for the safety of the operator and other occupants of the premises

Areas Covered/Levels of Illumination

Defined Escape Route

Based on 2m wide on the horizontal plane, preferably 1 lux but not less than 0.2 lux on the centre line. The lighting provided should operate within 5 seconds of the failure of the normal supply

Open Area (Sometimes referred to as 'anti-panic' lighting)

Not less than 0.5 lux at floor level of the open space. The ratio of max to min illuminance should be greater than 40:1.

These extracts are provided for guidance purposes. In order to fully comply with the many elements of the various applicable standards, a full and thorough assessment must be made

Luminaire Classifications

Quality Registered

All lighting luminaires produced by Feilo Sylvania are designed, manufactured and tested under a quality assurance system in accordance with BS EN ISO 9001 under certificate number FM 01687. Also, the company also complies with the environmental management system, BS EN ISO14001 certificate number EMS39002.

Compliance

The European Norm Electrical Certification (ENEC) has been adopted as a common mark of conformity with European Standards. A mark issued by any single national approbation body implies compliance with all seventeen international bodies. The ENEC mark now replaces the national test house symbol, and is appended by a number indicating from which test house the approbation originated.

The designated product(s) is (are) in conformity with the provisions of the following European Directives:

2014/20/EU & amendments	Directive 2014/35/EU of the European Parliament and of the Council of 26 February 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of electrical equipment designed for use within certain voltage limits.
2014/30/EU & amendments	Directive 2014/35/EU of the European Parliament and of the Council of 26 February 2014 on the harmonisation of the laws of the Member States relating to electromagnetic compatibility
2009/125/EC & amendments	Directive of the European Parliament and of the Council of 21 October 2009 on the establishing a framework for the setting of ecodesign requirements for energy-related products.
2011/65/EU & amendments	Directive of the European Parliament and of the Council of 6 June 2011 on the restrictions of the use of certain hazardous substances in electrical and electronic equipment.
COMMISSION REGULATION (EU) 2019/2020 & amendments	Laying down ecodesign requirements for light sources and separate control gears (Single Lighting Regulation)

If the product incorporates radio equipment:

2014/53/EU	Directive of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC Text with EEA relevance.
------------	---

The designated product(s) is (are) in conformity with the provisions of the following UK Legislation:

The designated product(s) is (are) in conformity with the provisions of the following UK Legislation:

The Electrical Equipment (Safety) Regulations 2016

The Electromagnetic Compatibility Regulations 2016

The Ecodesign for Energy-Related Products Regulations 2011

2012 No.3032 The Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment Regulations 2012

2021 No.1095 The Ecodesign for Energy-Related Products and Energy Information (Lighting Products) Regulations 2021

If the product incorporates radio equipment:

The Radio Equipment Regulations 2017

Electrical protection

EN 60598

Class I – Luminaire which relies on an earthed metal case to offer protection from live parts in case of failure.

Class II – Luminaire which relies on two layers of insulation to offer protection from live parts in case of failure.

Class III – Luminaire whose protection against electrical shock relies on supply at safely extra-low (SELV) and in which voltages higher than those of SELV are not generated

Voltage

Fittings and transformers are supplied primarily for operation on 230/240V 50 Hz. For alternative electrical specifications contact Technical Support.

Radio suppression

EN 55015, EN 61000 & EN 61547

Fittings comply with radio interference suppression and electromagnetic compatibility (EMC) regulations

Degree of protection

EN 60529

IP rating system is an International classification showing degrees of protection provided by luminaires against ingress by solid objects or moisture.

Specifications

The following notes prepared to meet the company's obligations imposed by the Health & Safety at Work Act 1974 (as amended) are of a general nature only. Specific information regarding installation use and disposal appropriate to individual models is provided in the instruction leaflet packed with the product, or can be found on the relevant pages of this catalogue.

The Health & Safety at Work Act 1974 imposes upon the users of the company's products an obligation to ensure that all personnel involved in the installation, handling, use or disposal of these products are acquainted with the information provided by the company and are made fully aware of any precautions that need to be taken.

The installation of these products should only be carried out by a qualified installer in accordance with the instructions supplied with the product.

Specifications

Leadership in design is based on constant development and improvement. Whilst great care is taken to give up-to-date information in this publication, the right is reserved to change any specifications herein detailed, without prior notice. All descriptions, illustrations etc, in this publication shall not form part of any contract.

Track and Spotlights

All track and spotlights are designed for normal, dry interiors, and are not recommended for use in damp or corrosive situations. Adequate ventilation will be necessary when tungsten spotlights are used in confined spaces where elevated temperatures will occur.

Lamps

Wattage and where applicable type of lamp are shown for every fitting. Incorrect lamps may affect efficiency, change the planned distribution, create glare and in some cases, seriously overheat the luminaire. Unless otherwise stated all luminaires are supplied without lamps.

Wiring

The majority of luminaires are fully prewired and with heat resistant cable wherever required.

Weights

Where given, the weights of luminaires do not include lamps.

Control Gear

Transformers and Control Gear are available for 240V 50HZ and 230V 50HZ with other options subject to special quotation.

240V 50HZ will be supplied unless any other voltage is requested at the time of ordering.

Ceiling Cut-outs

Throughout this publication cut-out sizes refer to the aperture for the ceiling ring with recessed fittings when mounted in soft fibrous tiles. For timber or metal tiles and cast-in construction, check dimensions on site.

Product colours and finishes

The Feilo Sylvania range of standard colours has been rationalised. This has given Feilo Sylvania the opportunity to harmonise its standard colours in line with developments that have taken place in architectural materials and building accessories.

For reference the standard paint finishes are now:

Concord luminaire

RAL 9005 Jet Black
RAL 9006 White Aluminium
RAL 9010 Pure White
RAL 9016 Traffic White

Sylvania Outdoor luminaires

RAL 9007 Grey aluminium

LED Lamps

RAL 9023 Pearl dark grey
RAL 9016 Traffic White

Please note:

- Due to photography and the printing process the colours reproduced in this catalogue may not be truly representative.
- Though paint colours may be the same, gloss, matt, satin and textured finishes will appear different.

Protection of Electronic Components

All products incorporating electronic components are protected against damage which may result from transients on the mains supply.

The level of protection incorporated is generally in excess of the minimum level specified in the current international standards.

It is the customer's responsibility to ensure that electronic equipment is not subjected to transients above these international immunity standards. In extreme cases additional suppression devices may be needed on the mains supply. The company does not take responsibility for damage to products caused by excessive mains transients.
